#### **Claims**

- 1. A substantially pure human nucleic acid comprising at least 40 nucleotides that hybridizes under high stringency conditions to a sequence found within the nucleic acid of SEQ ID NO:1.
  - 2. The nucleic acid of claim 1, wherein said sequence has a sequence complementary to at least 50% of at least 60 contiguous nucleotides of the nucleic acid encoding the methionine synthase polypeptide, said sequence sufficient to allow nucleic acid hybridization under high stringency conditions.
  - 3. The nucleic acid of claim 1, wherein said nucleic acid comprises a mutation or a polymorphism, wherein said nucleic acid probe detects a mutation or polymorphism selected from the group consisting of D919G, H920D, and ΔIle881.
  - 4. The nucleic acid of claim 3, wherein said sequence of said nucleic acid comprises the cobalamin binding domain of the human methionine synthase gene.

- 5. The nucleic acid of claim 2, wherein at least 18 contiguous nucleotides of said sequence are complementary to at least 90% of the corresponding nucleotides of the nucleic acid encoding the methionine synthase polypeptide.
- 6. The nucleic acid of claim 1, wherein said high stringency conditions comprise hybridization in 2X SSC at 40°C.
  - 7. A substantially pure human nucleic acid, wherein the sequence of said nucleic acid is at least 75% identical to the corresponding region of at least 50 contiguous base pairs of the nucleic acid of SEQ ID NO:1.

THIS PAGE BLANK (USPTO)

- 8. A substantially pure human nucleic acid, wherein the sequence of said nucleic acid is at least 35% identical to the corresponding region of at least 50 contiguous base pairs of the nucleic acid of SEQ ID NO:1.
- 9. A kit for the analysis of a human methionine synthase nucleic acid, said kit comprising a nucleic acid probe useful for detecting in the nucleic acids of a human a mutation or polymorphism in said methionine synthase nucleic acid, wherein said mutation or polymorphism is selected from the group consisting of D919G, H920D, and ΔIle881.
- 10. The kit of claim 9, wherein said probe comprises at least 40 nucleotides that hybridizes at high stringency to a sequence found within the nucleic acid of SEQ ID NO:1.

Database

Assaying method, useful for prognosis and diagnosis of disease, comprises contacting sample with a mutant analyte-binding enzyme and detecting binding. The present invention relates to a method for assaying an analyte in a sample comprising: contacting the sample with a mutant analyte-binding enzyme which has binding affinity for the analyte or an immediate analyte enzymatic conversion product but has attenuated catalytic activity; and detecting resulting binding. The method is useful in monitoring biological systems/processes, or prognosis/diagnosis of disease caused by imbalances of the analytes. The present sequence is a coding sequence Analyte-binding enzyme; analyte analysis; ss. Disclosure; Page; 187pp; English. WPI; 2001-071583/08.

                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ä
                                                                                                                                                                                                                                                                                                      The present invention provides a novel method of estimating the susceptibility of an individual to a developmental disorder using genetic and environmental variables. The method can be used in the diagnosis, prevention and treatment of disorders such as schizophrenia, spina bifida cystica. Tourette's syndrome, bipolar illness, autism, conduct disorders, attention deficit disorder, obsessive compulsive disorder, chronic multiple tic syndrome and learning disorders such as dyslexia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    541

The present invention relates to a method (M1) for estimating the susceptibility of an individual to have offspring that develop a developmental disorder. The method comprises analyzing that develop a and/or proteins from the biological sample, where analyzing results in a partial or full genotype for the alleles of two or more genes involved in folate, pyridoxine, and/or cobalamin metabolism. The present sequence is one such gene involved in folate metabolism. The method is also useful for diagnosing, preventing, and treating developmental disorders, e.g. schizophrenia, autism, attention deficit hyperactivity disorder, or obsessive-compulsive disorder. The protein encoded by the present sequence is also known as 5-methyltetrahydrofolate-homocysteine S-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   121

The present invention relates to a method for assaying an analyte in a sample comprising: contacting the sample with a mutant analyte-binding enzyme which has binding affinity for the analyte or an immediate analyte enzymatic conversion product but has attenuated catalytic activity; and detecting resulting binding. The method is useful in monitoring biological systems/processes, or prognosis/diagnosis of disease caused by imbalances of the analytes. The present sequence is a coding sequence used in the present invention. Note: the present sequence is not shown in specification, but was from Genbank, using information given in the specification
                                                                                                                                                                                                                                                                                                                                                         GECACCTGTGGAGAGACACGTCTTCTCTGCCGCGCCCTCTGCGCAAGAGGAGAACTCGACA 392

defect;

```
This cDNA clone encodes human wild-type methionine synthase (see AAW68594). A survey of the NCBI databases yielded several sequences corresponding to methionine synthases from different organisms.

Corresponding to methionine synthases from different organisms.

Comparison of these sequences generated 4 very conserved regions.

Comparison of these sequences generated 4 very conserved regions.

Degenerate oligonuclectides (see AAV34064-104) based on these conserved sequences are used as primers for RT-PCR with human and mouse mRNA. PCR products were subcloned, sequenced and aligned. Additional sequences were subcloned, personal sequences are associated by further PCR and inverse PCR. The full-length subsequently obtained by further PCR and inverse PCR. The full-length subsequently obtained by further PCR and inverse PCR. The full-length in this gene are associated with hyperhomocysteinaemia. One missense in this gene are associated with hyperhomocysteinaemia. One missense metaion (20) has also been detected. The invention relates to the diagnosis and associated altered risk for metaionine synthase deficiency, and associated altered risk for metaionine sequence variants for methionine compounds that claimed, as are methods for detecting sequence variants for methionine claimed, as are methods for screening for therapeutic compounds that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GETCACCTGTGGAGAGCACGTCTTCTCTGCCGCGCCCTCTGCGCAAGAGGAGAACTCGAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid comprising any one of

proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation—required gene or its gene product lies or agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of arrains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense uncleic acids required for rellular proliferation to isolate candidate molecules for rational for cellular proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target or term part of the printed specification, but was obtained in electronic format directly from WIPO at the wipport sequences.

The invention relates to an instruction where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid inhibits proliferation of a cell. Also included are:

(2) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated or polypeptide or its fragment whose expression is inhibited by the antisense cantisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway or that has an activity against a biological pathway or that has an activity against a biological pathway or that has an activity against a biological pathway or equired for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound activity, and strains and activity; (1) aculture compound that inhibits the extent or organism acts; (9) manufacturing an antibiotic; (10) profiling a compound activity; (11) a culture compound that inhibits the compound th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   represent sequence is one of the target.

3643 3469 3703 3529 3763 3649 Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection. The invention relates to Pseudomonas aeruginosa polypeptides and the bolymucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3102
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3042
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosa's and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using blochip technology. Sequences ABD01397-ABD17967 represent P. aeruginosa polymucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         469
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              769

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          જે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therexpy of pathological conditions, as molecular traspets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, of for the ability to bhind a P aeruginosa nucleic acid, as components of effective antibacterial targets, as tamplates for antibacterial drugs, including anti-P. aeruginosa -derived peptides or polypeptides, components for diagnosis and/or treatment of P. aeruginosa -caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using blochip technology. Sequences ABD01397-Capportseant P. aeruginosa polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           232
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    292
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               352

Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense ancience acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated contained to propeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway or the product or that has an activity against a biological pathway or the proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation of an organism acts; (9) manufacturing an antibicit; (10) profiling a compound sectivity; (11) a culture comprising strains in which the extent or product is overexpressed or underexpressed; (12) determining the extent compound that inhibits proliferation of an organism; or (13) identifying the target of a compound that inhibits the compound or a proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for encompound compound comp drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipp.int/pub/published\_pct\_sequences New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. 귱 Zyskind JW; Xu HH; invention relates to an isolated nucleic acid comprising any one Antisense; ds; prokaryotic essential gene; cell proliferation; Sequence 3669 BP; 1075 A; 686 C; 889 G; 1019 T; 0 U; 0 Other; Haselbeck R, Ohlsen KL, Yamamoto R, Forsyth RA, Claim 14; SEQ ID NO 32592; 1766pp; English. Prokaryotic essential gene #26379 BP. Malone C, Carr GJ, ACA44722 standard; DNA; 3669 (first entry Zamudio C, Trawick JD,
